

Lawn Soaker

Lawn Soaker is a ready to use soil wetting agent specifically developed for use on lawns. It improves the penetration of water so it can reach deep down to the roots. Regular use will ensure the soil re-wets and prevents further dry spots from forming. Lawn Soaker is the perfect solution to drought-proofing your lawn!

Controls

Dry patches within soil profile.

Sizes

2L Hose-on

Approximate area of coverage

Up to 150m²

How it works

Over time, soils may become hydrophobic and begin to repel water. When this happens, dry patches will form in your lawn which will make it increasingly hard to keep the moisture level up to your lawn, particularly during the hotter months. Lawn Soaker is a surfactant, which works to bond with the organic coating on the soil or sand particles and with water, allowing them to become wet. Much like a magnet changing polarity, the soil suddenly attracts the water rather than repelling it.

Application

For best results, regular use of Lawn Soaker, particularly on sand-based soils, is recommended as surfactants are biodegradable and will eventually break down. Application every 3 to 6 months, depending on the severity of the hydrophobic nature of the soil, will ensure optimum moisture absorbency. Simply clip onto your hose & apply.

Product Details

- The amount of RTU's (hose-on bottles) content needed to use through a sprayer will depend on the size of the customers area of coverage and sprayer size.
- Does not need to be watered in.
- Increases the soil's ability to hold nutrients, making your lawn healthier all year round.
- Will increase the drought tolerance giving it the legs to stand up to the hottest of summer days.
